

Homes and health – What's the connection?

People who feel good about themselves and in control of their life also have a high level of positive mental wellbeing. Good mental wellbeing helps to give people the confidence and drive to achieve the things they want to in life, and is linked to better health.

GoWell participants told us about their mental wellbeing. They answered some questions specially designed by researchers working with Scottish Government, and we calculated their wellbeing scores.

We found that the people who told us they lived in good quality homes and attractive peaceful neighbourhoods are most likely to enjoy high levels of mental wellbeing. We also found that people's wellbeing was higher when they were very satisfied with improvements to their homes, or if they felt that where they live makes them feel good about their life.

This is good news for the majority of people in Govan, who report having a positive view about where they live – although a minority of residents remain less satisfied. Overall, our findings suggest that ongoing investment in homes and neighbourhoods across Glasgow has the potential to genuinely benefit the way people feel.

We hope you have enjoyed hearing about what you told us in 2008 about your homes and neighbourhood. In spring of this year, the interviewers will have their clipboards at the ready to record your views and how they may have changed (or stayed the same) since 2008.

What will happen

Households in your area will be selected at random and will receive a letter from the survey company, BMG Research, inviting them to take part and letting them know about the survey and when the interviewers will be in the area. An interviewer (carrying an identity card) will then visit those households and arrange to interview one adult from each household. If you or another adult agree to participate in the study it will take 30–45 minutes to complete the interview and what you say will be completely confidential.

What next?

Once all the interviews have been carried out across all the GoWell areas (there are 15 in total) the information will be reviewed and analysed by the GoWell Researchers. They will then be able to compare the information given in 2006, 2008 and 2011, which will tell us about how (or if) the health and quality of life of people in your area has changed.

Watch this space...

Once we have new information this information will be shared with you in future newsletters, and in presentations to groups in your community. The information will also be used by organisations in Glasgow and beyond to help improve services and regeneration efforts now and in the future.

HOMES IN YOUR AREA

SPRING 2011

GOVAN

Welcome to the latest edition of the GoWell newsletter for Govan. In this newsletter we report back on what you told us in 2008 about your home and how you feel about where you live. We also explore the findings which are helping us to understand "What matters most?" when thinking about the connections between homes and health.

Your involvement makes this research possible, so "thank you!" to those who have contributed so far. The third GoWell survey takes place this year and our researchers will be returning to Govan to invite people to take part. Turn to page four for more information.

Finally, we hope you find this newsletter of interest and, as always, welcome any thoughts or comments you may have – such as what you like, or what we could do better. You can find our contact details on the back page of this newsletter.

Best wishes

The GoWell Team

Homes and health–
What's the connection?

GoWell
needs YOU!

What is GoWell?

GoWell is a ten-year research and learning programme that aims to find out from local people what they think of the approaches taken to improve their area. We are also looking at the impacts on health and wellbeing. Between now and 2014 we will carry out two more surveys in your area. These will help us understand:

- what changes have taken place,
- whether different aspects of community life are getting better,
- and what changes are important to residents.

GoWell's survey findings are already being used by organisations such as Glasgow Housing Association, other Registered Social Landlords, NHS Greater Glasgow and Clyde and Glasgow City Council to help to improve services and regeneration efforts both now and in the future.

Who took part in the survey?

- 255 Govan residents took part in our most recent survey in 2008 – 137 women and 118 men.
- The map, on the right, shows where the people we spoke to lived, and it is this area that the newsletter describes.

A high proportion of residents in the Govan study area live on their own (53%), and there are only a small number of households with children (16%).

Recognise this?

The 'typical' resident rents their home (86%), has lived in Govan for more than three years (71%) and enjoys living there (86%).

Homes in GOVAN

Housing types

- House or flat? Around half of the residents in the Govan study area for GoWell live in a house or cottage flat and the rest live in flats. As you might expect, around half of those we interviewed also have access to either their own or a shared garden.

Condition of homes

- The majority of people told us that, overall, the condition of their home was good or very good and the quality of heating systems in homes, for example, was also rated highly. However, some people identified specific parts of their property as being less satisfactory. The main concern people had at the time was home security. Also, for about a quarter of respondents, there was room for improvement in the external condition and appearance of the buildings, and dampness and condensation. See below for more details.

What residents in Govan told us about the condition of their homes:

	Good or very good	Room for improvement
overall condition of home	81%	19%
dampness / condensation	77%	23%
quality of kitchen	79%	21%
heating system	81%	19%
insulation	78%	22%
state of external repair	77%	23%
security of home	73%	27%

Home improvements

Across Glasgow an ongoing home improvement programme is taking place – affecting many (but by no means all) residents. In 2008, just over a third of our participants from Govan told us their home had been improved in the last two years. People who received these improvements seemed to be generally positive about them – with nearly 9 out of every 10 participants expressing satisfaction.

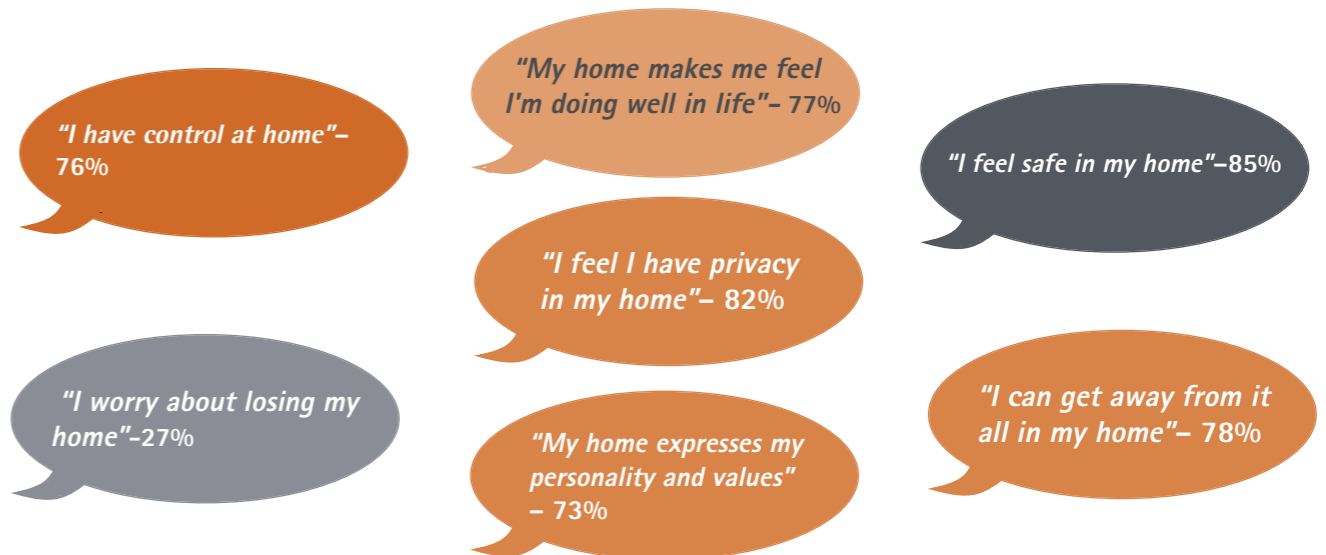

What you told us in 2008...

very satisfied	fairly satisfied	not satisfied
39%	47%	14%

How your home makes you feel

Homes mean more to us than just the bricks and mortar that they're made from, and that is why the GoWell researchers also ask questions about how you feel about your home and neighbourhood. For example, is your home somewhere where you feel safe and in control? The responses below say something important about the effect homes have on people's self-image and quality of life.

Overall, these findings show that the majority of people in Govan are satisfied with their homes. Most people in the area feel positive about where they live and think that their home is in good condition, although some did identify problems with their home. This suggests that there is still important work to be done to improve living conditions here – but the good news is that neighbourhood investment is ongoing and residents tend to be satisfied or very satisfied with those improvements that have already taken place. Over the page, we will describe how these findings link with what we know about people's health and mental wellbeing.
